compounds, by providing and designing a chemical compound using the model. The method further comprises synthesising the chemical compound, and evaluating the bloactivity of the synthesised chemical compound. The bloactivity is selected from inhibiting binding of a nucleotide donor compound or an acceptor compound to the MurG protein, or inhibiting association of the MurG protein to a membrane. Designing the chemical compound involves computational screening of one or more database of chemical compounds in which the 3D structure of the compounds are known, and interacting a compound identified by the screening step with the model by computer. The step of designing involves directed drug design, random drug design, or grid-based drug design. Designing involves selecting compounds which are predicted to bind to or mimic the 3D structure of the MurG protein. A modulator of glycosyltransferase is useful as antiblotics or antimicrobial agents in animals, and the mino acid sequence of the Escherichia coli MurG protein crystallised in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Eschericia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas acruginosa and Enterococcus faccalis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The be used to screen compounds in rational drug discovery programmes. The nucleic acid sequence is also useful to screen for homologous nucleic acid sequence is call or call iferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent electronic format directly from Wibo at the was obtained in electronic format directly from Wibo at the was obtained in electronic format while both sequences
                                                                                                                                                                                                                                                                                                                                                 New polynucleotides for the identification and development antibiotics, comprise sequences of antisense nucleic acids.
                                                                                                                                                                                                                                                                                                                                                                                                                 SEQ ID NO 10031; 511pp; English.

RESULT 3

```
The present invention describes a purified or isolated nucleic acid

sequence (I) consisting essentially of one of the 93 nucleotide sequences

consisting essentially of one of the 93 nucleotide sequences

consisting by the sequence of inhibiting proliferation of a microorganism

consisting by the sequence of inhibiting proliferation of a microorganism inhibits proliferation of

the microorganism, and the manufactured antibiotic is used in gene

consisting the microorganism in a subject, specifically humans. The nucleic acids that

consisting the proliferation can be used as antisense

therapeutics for killing bacteria. In addition to therapeutic

applications, the nucleic acid sequences complementary to sequences

consisting the proliferation can be used as diagnostic tools. For example,

mucleic acid probes complementary to proliferation-required sequences

that are specific for particular microorganisms can be used as

consisting the probes to AAH81481 encode the Escherichia coli proteins

consisting the propession of AAH81491 represent

collspans in AAB99239 to AAAB9431, and AAH81491 represent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           RISGLRGKGIKALIAAPILRIFUHUMARQARAIMKAYKPDVVIGMGGYVSGPGGLAAWSLGIP 120

the 6213 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound, a activity; (11) a culture compising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent
                                                                          301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to an isolated nucleic acid comprising any one of

to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational four discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryoric essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained ftp.wipo.int/pub/published_pct_sequences

the 6213 antisenes sequences given in the specification where expression of the 6213 antisenes sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibitied by the artistyly of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway the gene product or that has an activity against a biological pathway required for proliferation or that inhibits cellular proliferation of an activity in a gene required for collular proliferation of the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a gene required for underexpressed; (11) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overaxpressed or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the compound discovery programs. The antisense mucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryoric essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at the sequences. invention relates to an isolated nucleic acid comprising any one of New antisense nucleic acids, useful for identifying proteins or s for homologous nucleic acids required for cellular proliferation isolate candidate molecules for rational drug discovery programs. The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Eschericia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, Pseudomonas aseruginosa and Ennerococcus facealis. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins. The proteins can be used to screen compounds in rational drug discovery programmes. The used to screen compounds in rational drug discovery programmes. The be used to screen compounds in rational drug discovery programmes. The proteins are required for cell proliferation in a wide variety of organisms. The present sequence is also useful to screen for homologous nucleic acids which are required for cell proliferation in a wide variety of organisms. The present sequence represents an essential prokaryotic cellular proliferation protein. Note: The sequence data for this patent electronic format directly from WHDO at the printed specification, but was obtained in electronic format directly from WHDO at

Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fregment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation; (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8)

The present sequence is encoded by the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from Mischo at fitte, wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     241
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             301
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            62 RISGLRGKGIKALIAAPLRIFNAWRQARAIMKAYKPDVVLGMGGYVSGPGGLAAWSLGIP 121
                                 pathway in which a proliferation required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts, (9) manufacturing an authibioric, (10) profiling a compound's activity, (11) a culture comprising strains in which the gene product is overexpressed or underexpressed, (12) determining the extent to which each of the strains; or (13) identifying the target of a compound that inhibits the strains; or (13) identifying the target of a compound that inhibits the poliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for ceilular proliferation to isolate candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
identifying a gene required for cellular proliferation or the biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Antisense; prokaryotic essential gene; cell proliferation; drug design.

The invention relates to an isolated mucials and comportang any one or the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibitied by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibitied by the antisense nucleic acid; (4) an antibody capable of specifically binding the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway to proliferation or that the activity against a biological pathway is which a proliferation or the proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or agene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound,'s activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent to proliferation of an organism. The antisense uncleic acids required for proliferation in cells other than S, aurens, S. typhimurium, C. dentifying proteins or screening homologous mucleic acids act sequence of the target prokaryoric essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at the sequence of the sequence of the present sequence of the present and sequence of the property programment of the printed specification.
                                                                                                                                                                                                                                                                               New antisense nucleic acids, useful for identifying proteins or s
for homologous nucleic acids required for cellular proliferation
isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                         relates to an isolated nucleic acid comprising
                                                                                                                                                                                                                                                                                                                                                                                       Claim 25; SEQ ID NO 59581; 1766pp; English.

The first relates to an isolated incleic acid compitising any one of the foll antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide (5) producing the polypeptide of specifically binding the polypeptide (5) producing the polypeptide; (6) inhibiting callular proliferation or the activity of a gene in an operon required for proliferation or that that an an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation of an other approachment of the pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent proliferation of an organism. The antisense nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for cellular proliferation in cells other than S. aureus, S. typhimurlum, New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. The invention relates to an isolated nucleic acid comprising any Claim 25; SEQ ID NO 73040; 1766pp; English.

```
ï
K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryoric essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                           120
                                                                                                                                                                                                                                                                                                                                                                                        241

The invention relates to an isolated nucleic acid comprising any one of the $213 antisense sequences given in the specification where expression of the nucleic acid inhibite proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid containing the vector; (3) an isolated polypeptide whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the agene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (6) identifying a gene required for cellular proliferation or the biological of an activity, of the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound that inhibits proliferation of an organism acts; (13) administration and that inhibits proliferation of strains; or (13) identifying the target of a compound that inhibits proliferation of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism that a compound that inhibits the proliferation of an organism that a compound that inhibits the proliferation of an organism than antibone and an authority that the property or a gene of the strains is present in a culture or collection of strains; or (13) identifying the target was antibone and any organism than antibone and any organism than any organism and any organism than organism than any organism than any organism than any org
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         proliferation of an organism. The antisense mucheic acids are useful for identifying proteins or screening for homologous nucleic acids required drox cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at

                                                                                                                                     Duchaud
```

The invention relates to the isolation of genes and their encoded proteins from Photorhabdus luminescens. The isolated sequences are sources of probes and primers for detecting the geneme of P. luminescens and related species; to study polymorphisms; for gene analysis and for detection/amplification of the genes. Antibodies (Ab) raised against the polymorphisms encoded by the genes are used for detection/identification of P. luminescens, proteins, Ab and cells that carry a gene-containing vector are used to select compounds that modulate, regulate, induce or inhibit expression of the genes in plants, animals or microorganisms other than P. luminescens and are able to alter response or sensitivity to toxins and antibiotics produced by P. luminescens. Cells transformed to express the genes are useful for recombinant production of the proteins, particularly toxins and antibacterials useful as insecticides, bactericides and fungicides. The genes, proteins, vectors containing the genes and Ab are also useful the research and infection by bacteria or fungi that are sensitive to P. luminescens encoded toxins or antibiotics) and as biopesticides. Other uses of the genes and the proteins are as virulence if factors and for identifying targets of human diseases for which P. In infection is a modal functional which is and and infections and containing and diseases for which P. Genomic sequence of Photorhabdus luminescens and encoded polypeptides, useful e.g. as therapeutic antimicrobials and agricultural pesticides. cough). This Danchin A; luminescens is a model (particularly plague and whooping cough) sequence represents one of the isolated P. luminescens proteins ö 76.1%; Score 1431; DB 6; Length 356; 76.3%; Pred. The 6113 antisense sequences given in the specification where expression of the 6113 antisense sequences given in the specification where expression of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway required for that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the ŏ New antisense nucleic acids, useful for identifying proteins or screfor homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs. any invention relates to an isolated nucleic acid comprising Claim 25; SEQ ID NO 68811; 1766pp; English.

```
proliferation of an organism. The antisense nucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs, or for screening homologous nucleic acids trequired for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this pattent did not form part of the printed specification, but was obtained in electronic format directly from MIPO at the type. Note int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                   181

The invention relates to an isolated muchael acid compitaling any one of the 613 antisense sequences given in the specification where expression of the muchael acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the muchael acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, (7) identifying a compound that influences the activity of the gene in an operon required for proliferation, or that has an activity against a biological pathway in which a proliferation, or that inhibits cellular proliferation of an identifying a gene required for required for cellular proliferation of an organism acts; (9) manufacturing an antibiolot; (10) prolification of an organism acts; (9) manufacturing an antibiolot; (10) prolification of an organism. The attention of an compound, a activity; (11) a culture comprising strains in which the gene or which he test compound that inhibits prolification of an organism. The antisense nucleic acids required for cellular proliferation to isolate candinate molecules for rational dentifying proteins or screening for handled molecules for rational dentifying proteins or screening for handled molecules for rational actor proliferation in cells other than S. aurens, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         242

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the mucleic acid enceding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated contained by the coll propertied or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or the activity of a gene in an operon required for proliferation or the activity of a gene in an operon required for proliferation or that antibite a proliferation, or that inhibits cellular proliferation; (7) identifying a compound that inhibits cellular proliferation; (7) identifying a compound that inhibits cellular proliferation or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound's activity; (11) a culture comprising strains in which appropriate or underexpressed; (12) determining the extent to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisense nucleic acids required for proliferation to isolate candidate molecules for rational drug discovery programs, or for screening for homologous nucleic acids required for proliferation in cells of a compound that inhibits the cequired for proliferation to isolate candidate molecules for training proteins or P. aeruginosa. The present sequence is encoded by noe of the traget prokaryotic essential genes. Note: The sequence is encoded by noe of the traget prokaryotic essential genes. Note: The sequence at at a for this

Also included are:
(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Antisense, prokaryotic essential gene, cell proliferation, drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to an isolated nucleic acid comprising any one of

The invention relates to antisense inhibitors of genes essential to prokaryotic cellular proliferation, their use in identifying the genes, their use in the discovery of novel antibiotics, the essential genes their use in the discovery of novel antibiotics, the essential genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella pneumoniae, coli, Staphylococcus and Enterococcus faecalls. The invention is also useful for the identification of potential new targets for antibiotic development. The antisense nucleic acids can also be used to identify antibodies capable of binding to the express these proteins. The proteins can antisense mucleic acid sequence is also useful to screen for homologous contisense mucleic acid sequence is also useful to screen for homologous contisense mucleic acid sequence is also useful to screen for homologous contisens mucleic acid sequence represents an essential prokaryotic cellular proliferation protein. The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid conding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell contaning the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation, or the activity of a gene in an operon required for proliferation, or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a compound that influences the activity of pathway in which a proliferation required gene product lies cor a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, s activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent compound, s activity; (11) a culture comprising strains in which the gene product is overexpressed or underexpressed; (12) determining the extent of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The articessed or acids are useful for cellular proliferation to isolate and acids are useful for cellular proliferation in cells other than S. typhimurium, cellured for proliferation in cells other than S. aureus, S. typhimurium, are articled for proliferation in cells other than S. aureus, S. typhimurium, cellured for the part of the printed specification, but was obtained in electronic format directly from WHO at the sequence is encoded by the condition of the proliferation for the present sequences.
                                                                                                                                                                                                            Antisense; prokaryotic essential gene; cell proliferation; drug design.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New antisense nucleic acids, useful for identifying proteins or screfor homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Haselbeck R, Ohlsen KL,

The invention describes a composition comprising a membrane associated UDP-glycosyltransferase, MurG, preferably Escherichia coll protein in crystalline form. A model of UDP-glycosyltransferase is useful in a computer-assisted method of structure based drug design of bioactiv a compounds, by providing and designing a chemical compound using the method further comprises synthesising the chemical compound, and evaluating the bioactivity of the synthesising the chemical compound of an acceptor compound to the MurG protein of a nucleotide donor compound or an acceptor compound to the MurG protein, or inhibiting association of the MurG protein to a membrane. Designing the chemical compound involves computational screening of one or more database of chemical compound involves computational screening of one or more database of chemical compounds in which the 3D structure of the compounds are known, and inneracting a compound identified by the screening step with the model by computer. The step of designing involves directed drug design, candom drug design, or grid-based drug design, Designing involves selecting compounds which are predicted to bind to or mimic the 3D structure of the MurG protein. A modulator of glycosyltransferase is the respectively of the Haempounds influence of the Haempounds influen

```
the invention relates to an isolated nucleic acid comprising any one of the $613 antisense sequences given in the specification where expression of the nucleic acid inhibites proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (3) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of agene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound, a activity; (11) a culture comprising strains in which the gene product is overexpressed; (12) determining the extent the content of the content is a compound.
                                                                                                                                                                                                                                                                                                                                                                                                                             New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureuals. S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at the wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 61 RFGGLRGKGLATKFALPFNLLRACAQSLRALRRVKPDVVLGMGGYITFPAGLVTVLTGRP 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    to which each of the strains is present in a culture or collection of strains; or (13) identifying the target of a compound that inhibits the proliferation of an organism. The antisanse mucleic acids are useful for identifying proteins or screening for homologous nucleic acids required for ceilular proliferation to isolate candidate molecules for rational
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       62 RISGLRGKGIKALIAAPLRIFNAWRQARAIMKAYKPDVVLGMGGYVSGPGGLAAWSLGIP 121
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  122 VVLHEQNGIAGLTNKWLARIATKVMQAEPGAFPNAEVVGNPVRTDVLALPLPQQRLAGRE 181

the 6213 antisence sequences given in the specification where expression of the mucleic acid inhibites proliferation of a cell. Also included are: (1) a vector comprising a promoter operably linked to the nucleic acid encoding a polypeptide whose expression is inhibited by the antisense nucleic acid; (2) a host cell containing the vector; (3) an isolated polypeptide or its fragment whose expression is inhibited by the antisense antisense nucleic acid; (4) an antibody capable of specifically binding the polypeptide or its fragment whose expression is inhibited by the proliferation or the activity of a gene in an operon required for proliferation, (7) identifying a compound that influences the activity of the gene product or that has an activity against a biological pathway required for proliferation, or that inhibite cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies

The invention relates to an isolated nucleic acid comprising any one of the 6213 antisense sequences given in the specification where expression

Claim 25; SEQ ID NO 49098; 1766pp; English.

Sequence 7067, Application US/09543681A
Patent No. 6605709
GENERAL INFORMATION:
APPLICANT: GARY ERETON
TITLE OF INVENTION: UUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABILL
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
CURRENT APPLICATION NUMBER: US/09/543,681A
CURRENT ETLING DATE: 2000-04-05
                                                                                                                                                                                                                                                                               APPLICANT: GATY Breton et. al
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO KLEBSIELLA
TITLE OF INVENTION: PNEUMONIAE FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 2709.204001
CURRENT APPLICATION NUMBER: US 60/9/489,039A
CURRENT PPLICATION NUMBER: US 60/117,747
PRIOR APPLICATION NUMBER: US 60/117,747
NUMBER OF SEQ ID NOS: 14342

GENERAL INFORMATION:
APPLICANT: Griffais, R.
APPLICANT: Griffais, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, prever
TITLE OF INVENTION: and treatment of infection
FILE REFERENCE: 9710-003-999
CURRENT FILING PATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   QRLAGREGPVRVLVVGGSQGARILMQTMPQVAAKLGD---SVIIWHQSG-KGSQQSVBQA 230

Patent NO. 6551795
GENERAL INFORMATION:
APPLICANT: Marc J.
TITLE OF INVENTION: ABENDINOSA FOR DIAGNOSTICS AND THERAPEUTICS
FILE REFERENCE: 107196.136
CURRENT APPLICATION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     123 VLHEQNGIAGLINKWLARIATKVMQAEPGAFP-NAEVVGNPVRIDVLALPLPQQRLAGRE 181

Patent No. 6583266
GENERAL INFORMATION:
APPLICANT: SMITH, DOUGLAS
APPLICANT: MAO, JEN-I
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES
TITLE OF INVENTION: RELATING TO MYCOBACTERIUM TUBERCULOSIS AND LAPRAE FOR TITLE OF INVENTION: DIAGNOSTICS AND THERAPEUTICS
NUMBER OF SEQUENCES: 411
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                      121 PVVLHEQNGIAGLTNKWLARIATKVMQAEPG----AFPNAEVVGNPVRTDVLALPLPQQ 175
